Attachment A CTDEEP and EDR Database and Historical Records

1.0 REGULATORY BACKGROUND

This section addresses the presence of hazardous and contaminated materials in the vicinity of the project. Multiple federal and state regulations address the presence of site contamination and hazardous materials in construction and demolition activities.

The U.S. Resource Conservation and Recovery Act (RCRA) created a federal regulatory framework for "cradle to grave" hazardous waste management, from the time it is generated until its ultimate disposal. The 1980 Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) authorized USEPA to respond to releases of hazardous substances that endanger public health, welfare, or the environment. The applicable regulations for addressing asbestos-containing materials (ACM) are USEPA's National Emission Standards for Hazardous Air Pollutants (NESHAP). The Occupational Safety and Health Administration's (OSHA's) Lead in Construction regulations (29 CFR 1926.62) regulate the exposure to lead in construction.

Connecticut has adopted hazardous waste regulations that incorporate federal hazardous waste requirements (under both RCRA and CERCLA), and in some cases, has modified several federal requirements which make Connecticut's program more stringent or broader than the federal program. Connecticut's Remediation Standard Regulations (RSRs), CGS Section 22a-208a(c)(2); RCSA Sections 22a-133k-1 through 22a-133k-3, provide detailed guidance and standards that are used to determine whether or not remediation of contamination is required. The Connecticut Department of Public Health implements the standards for asbestos abatement (RCSA Sections 19a-332a-1 through 19a-332a-16) and lead abatement (RCSA Sections 19a-111-1 through 19a-111-11 and 20-478-1 and 20-478-2).

CTDOT's Office of Environmental Compliance (OEC) provides technical support and regulatory guidance related to hazardous wastes and regulated contaminated materials, including conducting environmental investigations of suspected waste sites in the vicinity of CTDOT projects and facilities; negotiating cleanup requirements with federal and state regulatory agencies; and managing site remedial activities.

A preliminary environmental assessment was undertaken within the Route 7 and Route 15 Interchange corridor to determine the potential for encountering hazardous or contaminated sites during future construction associated with the project. The objectives of the assessment are summarized as follows:

- To minimize or reduce the risk of exposure of highway and other agency personnel to toxic and hazardous chemicals during highway construction or roadway improvement activity;

- To avoid or minimize the environmental liability associated with property transfer during the acquisition of land and to prevent or minimize litigation against highway staff and third parties; and
- To avoid the additional costs associated with highway redesign, remediation, permitting or planning delays, should contaminated sites be encountered during roadway construction or improvement activity.

1.1 EVALUATION METHODOLOGY

Data collection was obtained from a computer-generated database and a review of current and former land uses. A review of state and federal government environmental regulatory agency records was conducted within the project limits using Environmental Data Resources, Inc.© (EDR) Radius Map Report ™ with GeoCheck® and the Connecticut Department of Energy and Environmental Protection (CTDEEP) public databases (Leaking Underground Storage Tank (LUST) and Oil and Chemical Spills (OCS) (Attachment A). Federal, state, and tribal databases searched by EDR, and corresponding minimum search distances, included, but were not limited to, the following:

- National Priority List (NPL), also known as “Superfund”, the NPL identifies sites for priority cleanup and is maintained by the U. S. EPA.
- Comprehensive Environmental Response, Compensation, and Liability Act Information System (CERCLIS) Superfund Enterprise Management System (SEMS) tracks hazardous waste sites, potentially hazardous waste sites, and remediation activities performed in support of EPA’s Superfund program.
- Environmental Response Notification System (ERNS) records and stores information on reported releases of oil and hazardous substances to the U.S. EPA.
- RCRA Notifiers Inventory of sites that have registered with the EPA as a hazardous waste generator or as a hazardous waste Treatment, Storage, or Disposal Facility (TSDF).
- Federal, State, and Tribal Institutional Controls / engineering controls (IC/EC) registries for sites with engineered controls in place.
- State Solid Waste Facilities / Landfills (SWF/LF); an inventory of solid waste facilities and/or landfills.
- State listed Underground Storage Tank (UST) sites having registered USTs.
- State listed LUST sites reported with leaking UST incidents.

2.0 EXISTING CONDITIONS

In general, the primary use of the land within the project corridor has historically been commercial and industrial with the majority of properties located along Main Avenue and several outlying properties on Pearl Street (off of Perry Avenue) and the northern and southern portions of Main Avenue. The historic and current uses of these properties can result in soil and groundwater contamination.

The usage history has been reconstructed from reasonably ascertainable, standard historical sources including, topographic maps, aerial photographs, Sanborn Fire Insurance Maps, city street directories, and property tax files. Documents obtained from the CTDEEP databases are included with this report as Attachment A.

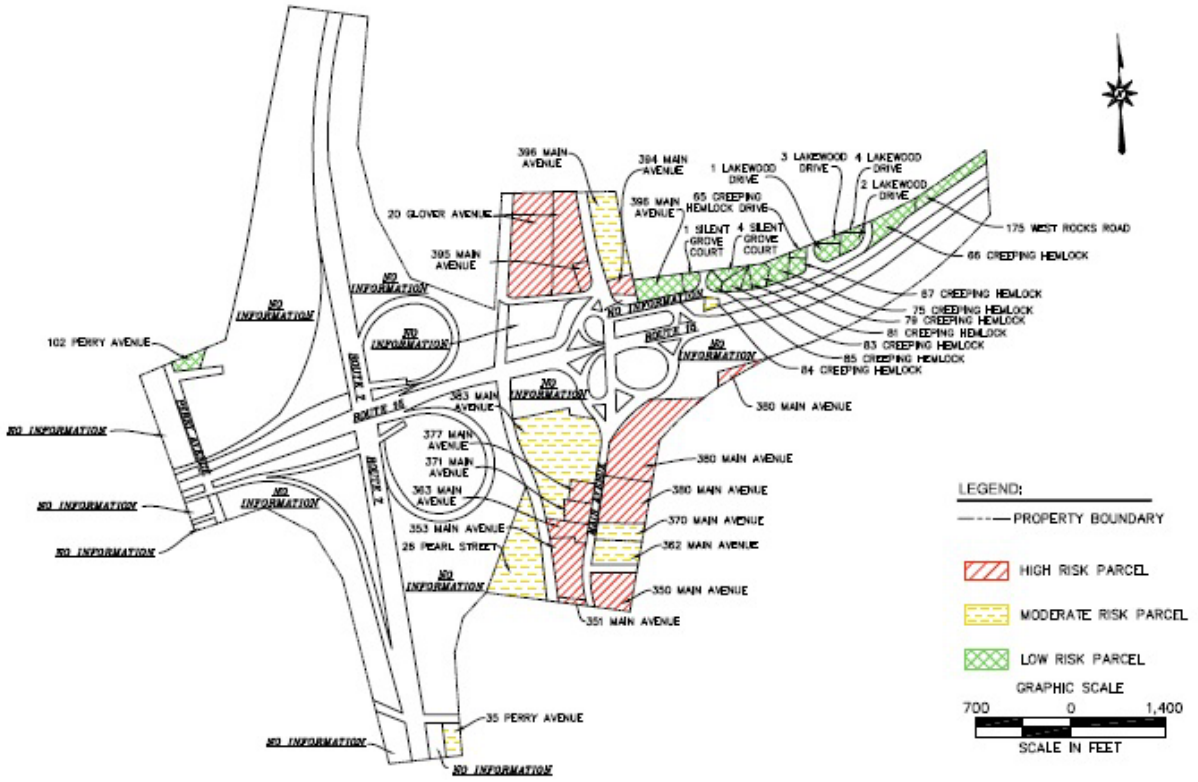

Figure 1.1.1 Site Risk Evaluation and Land Use Plan

A summary of the properties within the project corridor identified as potential current or past risks includes the following properties described below. The approximate locations and configurations of the evaluated parcels within the project corridor are depicted on Figure 1.1.1. Table 1 (at the end of this memo) summarizes the current and available historical usage of each individual parcel evaluated.

Main Avenue

- 346 Main Avenue – This property was historically occupied by a dry cleaning operation in the mid-1960s through the 1970s, and a newspaper publishing operation from the late 1970s until the late 1990s. The facility is listed with a closed LUST incident in 1989; however, it appears that the facility was not a registered UST Site, according to the EDR database. The property is listed as a Contaminated or Potentially Contaminated Site (CPCS) due to the LUST listing. The facility was reported as a RCRA generator of D001 Ignitable Waste from approximately 1993 through 2008. No violations were reported in association with this activity. The facility is listed with compliance monitoring for air emissions in 1999.

- 350-352 Main Avenue – This property was historically occupied by an educational institute from approximately 1949 through present day. This facility is registered with one 5,000-gallon heating oil UST installed in 1972 and one 6,000-gallon heating oil UST installed in 1993, listed as currently in use". In addition, a listing for this property indicates that one 5,000-gallon heating oil UST was installed in 1950 and removed in 1989 and one 6,000-gallon heating oil UST was installed in 1990 and is currently in use. An Emergency Incident Report on file with the CTDEEP reports a release of 100 gallons of heating oil due to a transfer line failure in 2005. The release was contained and the case is considered "closed" by the CTDEEP. An additional Emergency Incident Report documents a release of 2 gallons of heating oil in 2005 from an overfill. The release was cleaned and the case is considered "closed". The property currently operates as an educational institute.

- 351 Main Avenue – This property has historically been associated with a gasoline station since approximately 1963 and industrial operations in the early 1970s. Exxon was identified as a CPCS due to a LUST incident in which a 5,000-gallon waste oil UST was removed in 1998. Reportedly, impacted soil was removed and post-remediation monitoring was conducted. The LUST incident was reported as complete, indicating that a Significant Environmental Hazard was no longer associated with the facility. An Emergency Incident Report on file with the CTDEEP reports a release of waste oil due to an inground tank failure in 1998. The UST was removed and the case is considered "closed" by the CTDEEP. The property is listed as a Small Quantity Generator of D018 Benzene Waste, D039 Tetrachloroethylene Waste, and F002 Spent Nonhalogenated solvent Waste. No violations were reported for the facility. Hazardous waste manifests document the transportation of 85 gallons of Environmentally Hazardous Substance, Liquid, 348 gallons of Hazardous Substance, Liquid, and 450 pounds of Waste Flammable Solid between 1992 and 2004. The property currently operates with a dental office on site.

- 353 Main Avenue – This property has historically been associated with an industrial operation (Perkin Elmer). Perkin Elmer was identified on the Site Discovery and Assessment Database (SDADB), CPCS, and on the inventory of State Hazardous Waste Sites in 1996 associated with metals contamination. A Connecticut Property Transfer Form III was filed for the property in 1996 and 2012 (when the environmental conditions at the establishment are unknown, or a release of hazardous waste or a hazardous substance has occurred at the establishment, and any pollution from the establishment has not been remediated in accordance with the Remediation Standards Regulation (RSRs). Perkin Elmer was a historic generator of F001 and F002 Spent Halogenated Solvent Waste. Hazardous Waste Manifests from 1987 and 1990 report the removal of 220 gallons of Waste Trichloroethane. Noreast Management was identified with a LUST incident in 2012. According to the database, the incident was remediated to the applicable RSR criteria. A LUST Lookup Report on file with the CTDEEP reports that in 2012, one 7,000-gallon heating oil UST previously abandoned in 1999 was removed. Total lead and total petroleum hydrocarbons (TPH) were reported below regulatory criteria and no additional recommendations were made for investigation. An Emergency Incident Report on file with the CTDEEP reports a release of hydraulic oil from a hose failure in 2004. The release was removed and the case is considered "closed" by the CTDEEP. The EDR database notes that no registered USTs were present as of 2013. The property currently operates with a hotel on site.

- 360-362 Main Avenue – This property has historically been associated with a commercial operation since at least 1977. According to the EDR database report, the property is registered with a 1,000-gallon heating oil UST, which was installed in 1950 and removed in 1989. The property is registered with a 1,000-gallon heating oil UST installed in 1990 as currently in use. The property currently operates with a commercial operation.

- 363 Main Avenue – This property has historically been associated with a commercial operation since at least 1971 as an auto repair operation. The property currently operates with an upholstery business on site.

- 370 Main Avenue – This property has historically been associated with a commercial operation since at least 1972. The property currently operates with a commercial operation.

- 371 Main Avenue – This property has historically been associated with an auto repair operation registered with two 2,000-gallon gasoline USTs, one 5,000-gallon gasoline UST, one 6,000-gallon gasoline UST, and one 500-gallon used oil UST. The USTs were reportedly installed in 1950 and removed from the ground on an unspecified date. The property is listed with a LUST incident in 1989. The property is listed as a CPCS due to the LUST incident. The EDR database reports the status as "LUST Completed". One

Hazardous Waste Manifest was reported for 650 gallons of Flammable Liquid transported for off-site disposal in 1989. This property has historically been associated with 363 Main Avenue.

- 377 Main Avenue – This property has historically been associated with an auto repair operation since at least 1960. Hazardous waste manifests in 2005 and 2006 document the transportation of 7 and 8 gallons, respectively, of D039 Waste Tetrachloroethylene for off-site disposal. An Emergency Incident Report on file with the CTDEEP report a release of 1 gallon of motor oil from a motor vehicle accident in 2005. The case is considered "closed" by the CTDEEP. An additional Emergency Incident Report documents a release of 30 gallons of antifreeze and oil from an overfill. The release was cleaned and the case is considered "closed" by the CTDEEP. This property currently operates with a Midas Muffler on site.

- 380 Main Avenue – This property has historically been associated with an industrial operation (Pitney Bowes, Sperry Semiconductor) since at least 1963. Sperry Semiconductor was identified on the SDADB and the CPCS database as a Superfund Site with metals contamination in 1989. A Form III was filed for the facility with no remedial completion reported. Pitney Bowes was listed on the SDADB in 1995 with Phase I groundwater monitoring remedial activities. Hazardous Waste Manifests from 1990 through 1992 report the removal of 620 pounds of Waste Flammable Liquid, 200 pounds of Waste Acid Liquid, and 400 pounds of Hazardous Waste Solid. An Emergency Incident Report on file with the CTDEEP reports a release of gasoline from an unknown source in 2000. The case is considered "closed" by the CTDEEP. An additional Emergency Incident Report documents a release of 100 gallons of diesel from an unknown source in 1997. The release was contained and the case is considered "closed" by the CTDEEP. The property is registered with one 20,000-gallon heating oil UST installed in 1960 and removed in 1995 and one 10,000-gallon heating oil UST installed in 1988 and removed in 1995. A Property Transfer Form III was filed in May 1995 and acknowledged by the CTDEEP in June 1995. This property currently operates as a commercial retail plaza.

- 383 Main Avenue – This property is listed with a LUST incident in 1997; however, based on the mapping of the facility, it appears that the LUST incident was associated with the development of the Route 7 and Route 15 Interchange. According to the EDR database, a 20,000-gallon heating oil UST and impacted soil were removed in an area situated between the Route 15 on-ramp southbound and Route 15. A spill report was assigned to the incident and the property is listed as a CPCS due to the incident. The status of the LUST and release are considered "closed" by the Connecticut Department of Energy and Environmental Protection (CTDEEP). This property currently operates with an office building on site.

- 394 Main Avenue – This property has historically been associated with an auto repair operation from approximately 1949 to 1986. A Hazardous Waste Manifest from 1994 documents the transportation of 5,000-gallons of Waste Benzene for off-site disposal. The property currently operates with a donation center on site.

- 395 Main Avenue – This property has historically been associated with a gasoline service station since at least 1971 and is registered with four 4,000-gallon gasoline USTs installed in 1967, last used in 2011, one 10,000-gallon gasoline UST installed in 1987 and removed in 2007, one 1,000-gallon used oil UST installed in 1987 and removed in 2007, one 4,000-gallon gasoline UST installed in 1970 and abandoned-in-place, and one 550-gallon used oil UST installed in 1967. The facility is currently registered with one 12,000-gallon gasoline UST and one 10,000-gallon gasoline UST. A release was reported for the property in 2007 from a LUST incident during subsurface activities. The LUST status is complete and the spill case is considered "closed" by the CTDEEP. A Hazardous Waste Manifest from 1990 records the transportation of Waste Flammable Liquid for off-site disposal. A LUST Lookup Report on file with the CTDEEP reports groundwater monitoring events in 2004, 2005, and 2007. Gasoline constituents were reported in several samples analyzed. The property currently operates as a Shell gasoline station.

- 396 Main Avenue – This property was developed as a residential property, subsequently being developed into a commercial operation. The property currently operates with a hotel.

- 399 Main Avenue – This property is currently and historically associated with 20 Glover Avenue, and is listed on the EDR database report as a historic gas station operation.

Glover Avenue

- 20 Glover Avenue (alternatively known as 399 Main Avenue) – This property has been historically associated with an auto repair operation registered with one 20,000-gallon heating oil UST installed in 1950 and removed in 1989. In addition, the property is listed with five 20,000-gallon USTs installed in 1950 and removed (date unknown), and one 5,000-gallon diesel UST installed in 1950 and removed in 1989. 20 Glover Avenue is listed with Hazardous Waste Manifests from 1998 and 1999 for 215 gallons of Flammable Liquid transported for off-site disposal. A Hazardous Waste Manifest from 2000 documents the removal of 46,000 pounds of an Environmentally Hazardous Substance, Solid for off-site disposal. An Emergency Incident Report on file with the CTDEEP reports a release of an unknown powder. The case is considered "closed" by the CTDEEP. An additional Emergency Incident Report documents a release of petroleum from dumping in 1998. The release was removed and the case is considered "closed" by the CTDEEP. In 1999, a release of heating oil was reported from an inground tank failure. The release was associated with the removal of a 175-gallon UST. The release was contained and removed and the case is considered "closed". In 2004, a

release of 1000 gallons of raw sewage to the Norwalk River was reported due to a damaged sewer line. The case is considered "closed". This property is currently operating with an office building on site.

Creeping Hemlock Drive

- 65 Creeping Hemlock Drive – This property has historically been residential since at least 1966. The property is currently associated with residential use.
- 66 Creeping Hemlock Drive – This property has historically been residential since at least 1972. The property is currently associated with residential use.
- 67 Creeping Hemlock Drive – This property has historically been residential since at least 1966. The property is currently associated with residential use.
- 75 Creeping Hemlock Drive – This property has historically been undeveloped land.
- 79 Creeping Hemlock Drive – This property has historically been residential since at least 1972. The property is currently associated with residential use.
- 81 Creeping Hemlock Drive – This property has historically been residential since at least 1972. The property is currently associated with residential use.
- 83 Creeping Hemlock Drive – This property has historically been residential since at least 1966. The property is currently associated with residential use.
- 84 Creeping Hemlock Drive – One hazardous Waste Manifest is associated with this property. In 2002, 210 pounds of Waste Mercury was removed for off-site disposal. This property is currently associated with a pump station for water treatment.
- 85 Creeping Hemlock Drive – This property has historically been residential since at least 1972. The property is currently associated with residential use.

West Rocks Road

- 175 West Rocks Road – This property has historically been residential since at least 1972. The property is currently associated with residential use.

Pearl Street

- 26 Pearl Street – This property has been historically associated with commercial operations since at least 1960. The facility is registered with one 3,000-gallon heating oil UST that was reportedly abandoned-in-place (date unknown). One Hazardous Waste

Manifest reported the removal of 5 pounds of aerosols in 2007. This property currently operates with a commercial operation.

Silent Grove Court

- 1 Silent Grove Court – This property has historically been residential since at least 1966. The property is currently associated with residential use.

- 4 Silent Grove Court – This property has historically been residential. The property is currently associated with residential use.

Perry Avenue

- 35 Perry Avenue – This property has been historically associated with commercial use since at least 1980. The property currently operates with a commercial warehouse operation.

- 102 Perry Avenue – This property was historically undeveloped prior to residential use since at least 1999. The property is currently associated with residential use.

Lakewood Drive

- 1 Lakewood Drive – This property has historically been residential. The property is currently associated with residential use.

- 2 Lakewood Drive – This property has historically been residential. The property is currently associated with residential use.

- 3 Lakewood Drive – This property has historically been residential. The property is currently associated with residential use.

- 4 Lakewood Drive – This property has historically been residential. The property is currently associated with residential use.

Kellogg-Deering Well Field (EPA Id No. 110028889317)

According to EPA's Environmental Justice Screening and Mapping Tool (Version 2016), no Superfund sites or Brownfields are present within the immediate project area; however, contamination issues exist associated with the Kellogg-Deering Well Field Site south of the interchange. Also known as the Smith Well Field, this site is a 10-acre property along the western bank of the Norwalk River that extends to the Project site (US EPA CERCLIS Search results https://ofmpub.epa.gov/enviro/cerclisquery_get_report?pgm_sys_id=CTD980670814). Protection of the well field is addressed in Section 2.0.

3.0 POTENTIAL IMPACTS AND MITIGATION MEASURES

Three preliminary alternatives – No Build, Alternative 21D and Alternative 26 – have been developed for the realignment study of the Route 7 and 15 interchange.

No Build Alternative

The No Build Alternative would not result in any improvements to the roadway network around the existing interchange. As such, there would be not hazardous or contaminated materials impacts.

Build Alternatives 21D and 26

If properties acquisitions become necessary for these alternatives during the design phase, CTDOT is required to perform due diligence on moderate to high risk parcels prior to acquiring properties, including identifying potential on and off-site areas of environmental concern that may have resulted in subsurface contamination at the site.

Based on the historic and current uses of the properties within the project corridor, CTDOT will perform Subsurface Site Investigations to collect soil and groundwater data in order to evaluate whether the proposed construction activities require management of contaminated soil and groundwater. If contamination is identified on the sites, CTDOT's OEC will ensure that proper procedures are followed with respect to the contamination and that remediation is performed pursuant to federal and state laws and regulations, including the preparation of site-specific Environmental HASPs.

7/18/2013	7/25/2013	UST Facility Notification

Notification for Underground Storage Tanks (S. Brown) HRP Associates Inc.: One 7,000-gallon heating fuel UST (A1) was removed from ground on 6/22/2012. The required site assessment was completed HRP Associates Inc. of Farmington, CT. Soil samples were collected and analyzed for COCs. The boxes for COCs above the RSRs, remedial actions recommended, and remedial actions completed were not checked. Attached was a UST Closure Report.

Docs: B:\Norwalk\353MainAvenue_Norwalk\353MainAvenue_Norwalk_USTNotification_7-20-

7/22/2013	7/25/2013	Tank Closure Assessment Report

Re: Closure of a Heating Oil Underground Storage Tank, 353 Main Avenue, Norwalk (D. Allen and S. Brown) HRP Associates, Inc.: On June 22, 2012, a 7,000-gallon heating fuel UST (for on-site use), previously abandoned in place in 1999, was removed from site. In 1999, 9 soil samples were collected and were analyzed for SPLP cadmium (1312), lead (EPA 3050A), and TPH (EPA 418.1). One sample was also analyzed for VOCs (EPA 602/8021B). The reporting limit for benzene was above the GA PMC. Total lead and TPH were detected, but were below the GA PMC and Res DEC. In June 2012, the UST was removed from the ground. 6 soil samples were screened with PID for TVOCs. All readings were ND. 3 soil samples were collected and were analyzed for SVOCs (EPA 8270D). Only one sample had one COC (CS-11, fluoranthene = 5.6 mg/kg) above the GA PMC. All other COCs were below the method reporting limits, GA PMC, and Res DEC. Consultant does not indicate any recommends. [Note: 2012 soil data laboratory reports are missing even number pages.

the 17 soil samples. Acetone was identified in 7 of the 9 soil samples collected from the gasoline excavation. Concentrations of VOCs were below applicable standards. Total lead was identified in all 17 soil samples collected from the gasoline tank and multiproduct dispenser excavations at concentrations ranging from 6.6-358 mg/kg. Leachable lead was identified in 3 of the 17 soil samples at concentrations ranging from 0.05-0.321 mg/l. Acetone was identified in all 5 soil samples collected from the used oil excavation and PCE was identified in one of the five soil samples. ETPH was detected in the 5 soil samples. PCBs were not identified above lab detection limits in soil samples collected. Total arsenic, barium, chromium and lead were detected in the soil samples collected from the used oil UST. Leachable barium and selenium were detected in the soil samples from the used oil tank excavation. Acetone and PAH were identified in three of the five soil samples collected from the HF excavation. ETPH was detected in 3 of the 5 soil samples collected. Compounds detected in the post excavation soil samples collected from the HF excavation were below applicable standards.

Docs:

4/17/2007	4/25/2007	Site Status Report

Site Status Report (Carrie Sharkey) Sovereign Consulting Inc: Groundwater monitoring was done for January through June 2007. A total of 3 monitoring wells were gauged and sampled on March 8, 2007. Groundwater samples were analyzed for VOCs (EPA 8260) and ETPH. 2 samples had detectable COCs. The detected COCs were above GWPC in MW-101.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by BL Companies were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by BL Companies were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/05/2016 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

KELLOGG-DEERING WELL	***NORWALK WATER DEPART***	***SSE 1/8 - 1/4 (0.133 mi.)***	***0***	***8***

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/10/2016 has revealed that there are 3 SEMS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/12/2016 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
CVS PHARMACY 0854	327 MAIN AVE	SSE 1/8 - 1/4 (0.146 mi.)	P118	423

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are

3 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CT SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Protection's Inventory of Hazardous Disposal Sites.

A review of the CT SHWS list, as provided by EDR, and dated 04/23/2010 has revealed that there are 5 CT SHWS sites within approximately 1 mile of the target property.

State and tribal registered storage tank lists

CT UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Protection's "Town Inventory" UST Listing.

A review of the CT UST list, as provided by EDR, and dated 11/22/2016 has revealed that there are 16 CT UST sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/12/2016 has revealed that there are 8 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CT CPCS: A list of Contaminated or Potentially Contaminated Sites within Connecticut. This list represents the "Hazardous Waste Facilities," as defined in Section 22a-134f of the Connecticut General Statutes (CGS). The list contains the following types of sites: Sites listed on the Inventory of Hazardous Waste Disposal Sites; Sites subject to the Property Transfer Act; Sites at which underground storage tanks are known to have leaked; Sites at which hazardous waste subject to the RCRA; Sites that are included in EPA's (CERCLIS); Sites that are the subject of an order issued by the Commissioner of DEP that requires

investigation and remediation of a potential or known source of pollution; and Sites that have entered into one of the Department's Voluntary Remediation Programs.

A review of the CT CPCS list, as provided by EDR, and dated 11/29/2016 has revealed that there are 63 CT CPCS sites within approximately 0.5 miles of the target property.

CT LWDS: The Leachate and Waste Water Discharge Inventory Data Layer (LWDS) includes point locations digitized from Leachate and Wastewater Discharge Source maps compiled by the Connecticut DEP.

A review of the CT LWDS list, as provided by EDR, and dated 07/17/2009 has revealed that there are 3 CT LWDS sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 9 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Summary Details:

Conditions at listing September 1983): The Kellogg-Deering Well Field covers 10 acres in Norwalk, Fairfield County, Connecticut. It contains four wells that supply Norwalk s 45,000 residents. In 1975, routine monitoring by the Norwalk FirstTaxing District Water Department detected elevated levels of

KELLOGG-DEERING WELL FIELD (Continued) **1000290227**

trichloroethylene in the wells. Since then, the State and private parties have investigated the site extensively to define the problem and identify source s) of contamination. The water department blends water from the wells and nearby reservoirs to provide water that is safe for human consumption. Status June 1984): EPA is working with the water department to clean up the site. EPA has obligated 475,000 for remedial planning activities and for a remedial investigation/feasibility study to determine the type and extent of contamination at the site and identify alternatives for remedial action.

CERCLIS Site Alias Name(s):
Alias ID: 101
Alias Name: KELLOGG-DEERING WELL FIELD
Alias Address: NORWALK WATER DEPARTMENT
NORWALK, CT 06856
Alias Comments: Not reported
Site Description: The Kellogg-Deering Well Field Site, also known as the Smith Well Field, is a 10-acre public supply well field in southwestern Fairfield County, along the western bank of the Norwalk River in Norwalk, Connecticut. The site is located 4,000 feet south-southwest of Routes 7 and 15 interchange. The Kellogg-Deering well field is being impacted by contamination from sources outside of the well field. Under CERCLA, a facility is coextensive with the associated contamination; thus, for legal purposes, the Site in fact includes the upgradient plume that is migrating towards the well field. The well field is owned and operated by the Norwalk First Taxing District Water Department (NFTD) serving approximately 45,000 people. The primary source of public water supply to the NFTD is surface water from four reservoirs. Reservoir water is blended with well field water at varying ratios depending on reservoir storage and distribution system location. The well field consists of four production wells and a conventional treatment plant contributing between 15 and 35 percent of the NFTD water supply. The four wells are known as Layne

KELLOGG-DEERING WELL FIELD (Continued) **1000290227**

1, Layne 2, Deering 1, and Deering 2. Groundwater from the well field area is presently used by the NFTD for public water supply. Surface water is the principal source of water supply for the NFTD; hence, the aquifer is not a sole source one. The appropriate groundwater class, for the aquifer underlying the well field, under the EPA Ground Water Protection Strategy is II-A. Land use varies in the area. Immediately (within 100 feet of the well field property line) west, north, and south of the well field are residential areas. Across the river, east of the well field, is a landfill not presently in use. The area east of the landfill and Deering Pond is part residential and part industrial.

The southern acreage of the Kellogg-Deering well field site has been owned by the NFTD since approximately 1935. Several lots were added in 1936. The northern 7 acre tract was purchased in 1964. The first of the four production wells, Layne 1, was installed in 1955. The other three were installed as follows: Deering 1 in 1965, Deering 2 in 1966, and Layne 2 in 1975.

Trichloroethene (TCE) was discovered in the groundwater in 1975. The NFTD began analyzing groundwater samples from the well field in that year. Between 1975 and 1980 the Connecticut Department of Environmental Protection (DEP) performed several inspections and samplings at the Kellogg-Deering site and initiated investigations of several local industries. The site was promulgated to the National Priorities List (NPL) in 1984. Efforts to determine the extent of contamination, which began with the DEP investigations, continued with the EPA Remedial Investigation (RI). Previous studies showed that the areas north, west, and south of the site could be discounted as potential contaminant sources. For the purpose of characterizing the groundwater contamination plume a study area was developed to include the well field site and the area east of the site. In May 1981, a redwood slat aerator was installed on Layne 2 by the NFTD. The aerator consistently removes 65 percent of the volatile organics in the groundwater. A composite sample of well field water after treatment and prior to blending with reservoir water was analyzed in 1984. The composite excluded Layne 1 water which was normally pumped to waste to reduce contaminant levels on the other three wells. It consisted of samples at the point at which wells Deering 1 (raw), Deering 2 (raw), and Layne 2 (aerated) combine. TCE levels in the composite averaged 10 parts per billion (ppb). It was estimated that well field water was blended with reservoir water at a ratio ranging from 1:3 to 1:5. The Superfund Implementation Group, Center for Environmental Health, Centers for Disease Control reviewed the composite data and concluded that it did not appear to be an imminent and substantial endangerment to public health at the time. The EPA thus concluded that no emergency measures were required at the time. In 1984, the daily production of the surface water system was 5.1 million gallons per day (mgd) while its safe yield was 5.25 mgd. The NFTD determined that more of the well field safe yield had to be available for public supply in order to guarantee that the surface system's safe yield would not be exceeded. Hence, the NFTD installed in 1985 an air stripper on Layne 1, which is potentially the best yielding well, but the most contaminated one. Layne 1 is the deepest of the four wells, intercepting the upgradient plume without the full benefit of dilution from the Norwalk River, and therefore showing higher levels of contamination. Such plume is legally considered to be part of the site. The stripper is rated by the manufacturer as being 99 percent efficient, but not yet in operation due to problems with a holding tank. The tank is expected to be repaired during the fall of 1986. The stripper is capable of treating water from any of the four production wells. The population at risk is the approximately 45,000 people served by the NFTD. Environmental concerns are limited to contamination of the unconfined aquifer in the well field and study area. There is no evidence of impact to surface water bodies. Benthic and aquatic organisms do not appear to be at risk. No other welfare concerns have been identified. Primary routes of exposure associated with this site include ingestion of drinking water, and

KELLOGG-DEERING WELL FIELD (Continued) **1000290227**

inhalation through showering. Several chemical substances were detected throughout the study area. Most of them were organic volatiles dissolved in the groundwater. The response actions at this site have been phased into operable units (OU). An operable unit is a discrete part of the entire response action that decreases a release, threat of release, or pathway of exposure. The first operable unit involves the well water treatment and distribution system (i.e. the human pathway of exposure). The second operable unit will serve to further characterize and/or identify potential source areas and to gather sufficient information to determine the necessity for and proposed extent of remedial action to address such source areas. The primary objective of the Kellogg-Deering well field first operable unit is to protect the public by assuring a reliable supply of safe, potable water to the public currently dependent on the well field. A Remedial Investigation/Feasibility Study (RI/FS) was undertaken from June 1984 to June 1986 to determine the nature and extent of the threat presented by the release and to evaluate proposed remedies at the site. A Record of Decision (ROD) addressing Operable Unit 1 (OU1) was completed in September 1986. Operable Unit 2: A supplemental RI/FS began at the site in 1987 to provide further information regarding the source(s) and extent of groundwater contamination at the site. In addition to better defining the area of groundwater contamination found during the initial RI, the supplemental RI also identified a major source area of groundwater and soil contamination at the Elinco/Pitney Bowes/Matheis Court Complex (the complex) located at 272 and 282 Main Avenue in Norwalk. The supplemental RI concluded that the contamination at the complex is contributing to the contamination at the Kellogg-Deering Well Field and the aquifer supplying the Well Field. The supplemental RI also identified soil gas contamination sources at the complex and provided an analysis of indoor air quality. The complex is considered to be a major soil and groundwater contamination source area. Since July 29, 1986, EPA has notified approximately nine parties who are either past or present owners or operators of the facility of their potential liability with respect to the site. In 1986, EPA issued an administrative order to the NFTD ordering the NFTD to complete construction of and begin operation of an existing air stripping at the Kellogg-Deering Well Field. By letter dated May 11, 1988, EPA notified NFTD that it had satisfied the requirements of the order. The potentially responsible parties (PRPs) have been active in the remedy selection process for the site. Comments were submitted by the PRPs during the public comment period. Special notice has not been issued in this case to date. A ROD addressing Operable Unit 2 was completed in September 1989. The September 1989 Record of Decision (ROD) for the second operable unit of the Kellogg-Deering Superfund Site (Site) included the implementation of institutional controls to restrict the use of contaminated soil and groundwater at the Site. Institutional controls have been established to restrict the use of contaminated soils at the site, as described in Section III below. EPA has determined that existing state and local laws and permitting requirements related to the use of groundwater are adequate and reasonable institutional controls to restrict the use of Site groundwater for private consumption and to ensure the protection of human health. Therefore, EPA has determined that implementing further institutional controls to restrict the use of groundwater is unnecessary. This change does not fundamentally alter the remedy selected in the ROD. An Explanation of Significant Differences addressing Operable Unit 2 was completed in March 1997.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110003014130

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110003020427

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE WASTE

Violation Status: No violations found

Property Transfer Forms:	Form III (DEP-PERD-PTP-203) when a discharge, spillage, uncontrolled loss, seepage or filtration of hazardous waste has occurred at the parcel that has not been fully remediated or the environmental conditions at the parcel are unknown. The person signing the Form III certification agrees to investigate and remediate the site in accordance with the remediation standards. The statute does not require completion of remediation before the parcel is transferred. Any person submitting a Form III shall simultaneously submit a completed Environmental Condition Assessment Form (ECAF)(DEP-PERD-PTP-200).

Environmental Interest/Information System

MOSAIC THE (Continued) **1001075916**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110002479639

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

FINDS:

Registry ID: 110003005578

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Property Transfer Forms:	Form III (DEP-PERD-PTP-203) when a discharge, spillage, uncontrolled loss, seepage or filtration of hazardous waste has occurred at the parcel that has not been fully remediated or the environmental conditions at the parcel are unknown. The person signing the Form III certification agrees to investigate and remediate the site in accordance with the remediation standards. The statute does not require completion of remediation before the parcel is transferred. Any person submitting a Form III shall simultaneously submit a completed Environmental Condition Assessment Form (ECAF)(DEP-PERD-PTP-200).

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Contact country: US
Contact telephone: (203) 762-4541
Contact email: Not reported
EPA Region: 01
Land type: Private
Classification: Non-Generator
Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:
Owner/operator name: PERKIN-ELMER CORPORATION
Owner/operator address: MAIN AVENUE
NORWALK, CT 06859
Owner/operator country: Not reported
Owner/operator telephone: (203) 762-1000
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: Yes
Underground injection activity: No
On-site burner exemption: No

P E CORP (Continued) **1015730767**

Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

. Waste code: F001
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F006
. Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS, EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC, AND ALUMINUM

P E CORP (Continued) **1015730767**

PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

. Waste code: F007
. Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

. Waste code: F008

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

SEH: List of Significant Environmental Hazards Report to DEEP

The Significant Environmental Hazard Statute is intended to identify and abate short-term risks associated with specific environmental conditions identified in the statute. After abatement of short-term risks (meaning abatement of the significant environmental hazard condition), there may still be potential long-term risks associated with the release. However, a significant environmental hazard can be considered abated under the statute even though potential long-term risks may not have been addressed.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NJ MANIFEST: Manifest Information

Hazardous waste manifest information.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

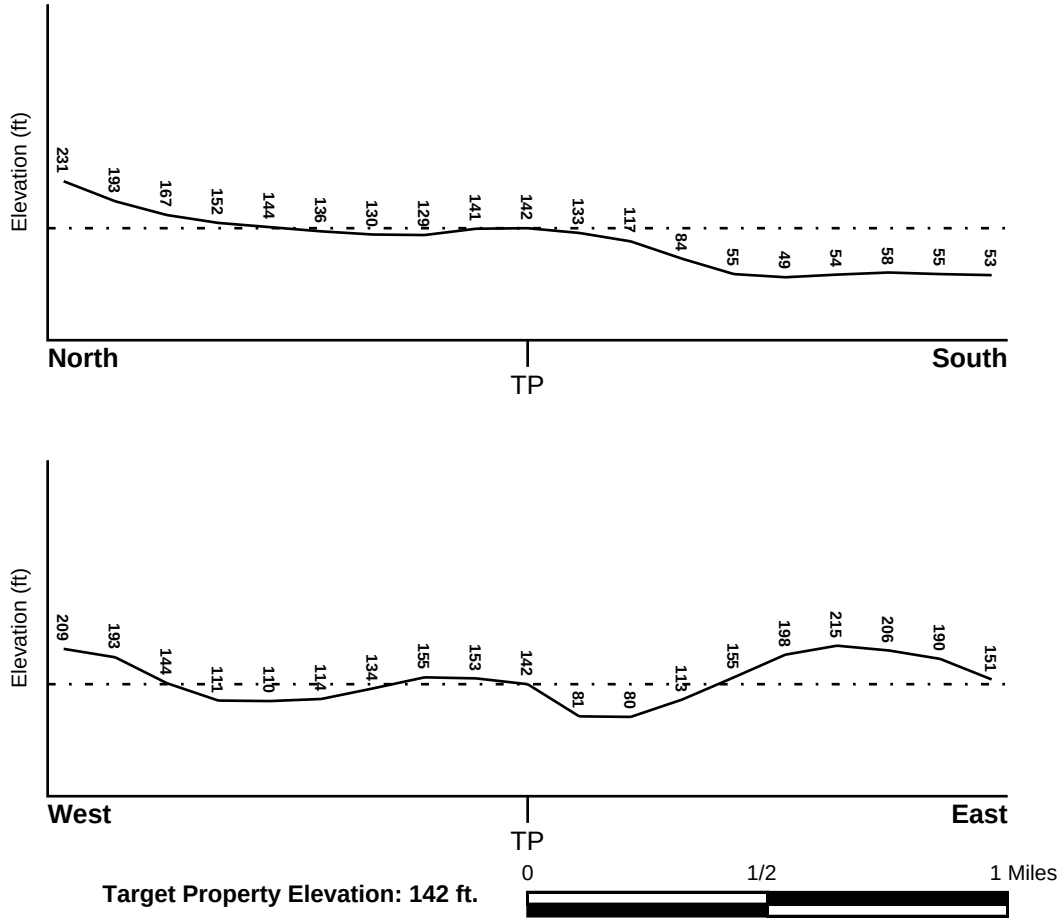

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
09001C0393G	FEMA FIRM Flood data

NORWALK NORTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile South
Site Name:	KELLOGG-DEERING WELL FIELD
Site EPA ID Number:	CTD980670814
Surficial Aquifer Flow Dir.:	WSW WITHIN THE STRATIFIED DRIFT, TOWARD THE WELL FIELD. A NW FLOW COMPONENT TOWARD DEERING POND EXISTS IN THE NORTHERN SECTION OF THE SITE. FLOW DIRECTION IN THE AREA WEST OF THE WELL FIELD IS EXPECTED TO BE E. VELOCITY RANGES FROM 2 TO 20 FEET/DAY.
Measured Depth to Water:	not available.
Hydraulic Connection:	Ground water movement in the site area is primarily lateral, with some vertical movement in the well field area that results from well pumping. The bedrock and overlying glacial drift deposits appear to be hydraulically connected.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Udorthents

Soil Surface Texture: loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 7.8 Min: 4.5
2	5 inches	21 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 703 Min: 0.01	Max: 7.8 Min: 4.5
3	21 inches	79 inches	very gravelly sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 703 Min: 0.01	Max: 7.8 Min: 4.5

Soil Map ID: 2

Soil Component Name: Hollis

Soil Surface Texture: highly decomposed plant material

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 2 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	1 inches	highly decomposed plant material	A-8	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Organic Clay or Organic Silt.	Max: 42 Min: 14	Max: 5.5 Min: 3.5
2	1 inches	5 inches	gravelly fine sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 4	Max: 6 Min: 4.5
3	5 inches	9 inches	channery fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 4	Max: 6 Min: 4.5
4	9 inches	14 inches	gravelly fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 4	Max: 6 Min: 4.5

Soil Component Name: Rock outcrop

Soil Surface Texture: unweathered bedrock

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 2 inches

Depth to Watertable Min: > 0 inches

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Tidal Wetlands
Source: Department of Energy & Environmental Protection
Telephone: 860-424-4054

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Connecticut Leachate and Wastewater Discharge Sites
Source: Department of Environmental Protection
The Leachate and Waste Water Discharge Inventory Data Layer (LWDS) includes point locations digitized from Leachate and Wastewater Discharge Source maps compiled by the Connecticut DEP. These maps locate surface and groundwater discharges that (1) have received a waste water discharge permit from the state or (2) are historic and now defunct waste sites or (3) are locations of accidental spills, leaks, or discharges of a variety of liquid or solid wastes.

EPA-Approved Sole Source Aquifers in Connecticut
Source: EPA
Sole source aquifers are defined as an aquifer designated as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for the area and for which there are no reasonable alternative sources should the aquifer become contaminated.

Community and Non-Community Water System Wells
Source: Department of Public Health, Water Supplies Section
Telephone: 860-509-7333
Active, emergency and inactive wells used for potable purposes that are owned and operated by active community and non-community water systems in Connecticut.

OTHER STATE DATABASE INFORMATION

RADON

State Database: CT Radon
Source: Department of Public Health
Telephone: 860-509-7367
Radon Statistical Summary

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater
Source: Department of Commerce, National Oceanic and Atmospheric Administration

Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary faultlines, prepared in 1975 by the United State Geological Survey
